Network+ (2018 Objectives)

itcap™

What is Network+, and why should I take this class?
So glad you asked! Network+ is a performance-based certification that helps you develop your career in IT infrastructure by validating the hands-on skills needed to troubleshoot, configure, and manage both wired and wireless networks. You should take this class for vital skills needed (shown below) to perform at a level that proves your expertise.

What will I learn?
In addition to addressing the current technologies, you'll learn the skills required to:
- design and implement functional networks.
- configure, manage, and maintain essential network devices.
- use devices such as switches and routers to segment network traffic and create resilient networks.
- identify benefits and drawbacks of existing network configurations.
- implement network security, standards, and protocols.
- troubleshoot network problems.
- support the creation of virtualized networks.

What are the prerequisites?
If you already possess at least 9-12 months of professional IT networking experience and CompTIA A+ certification, you're ready to go! If you don't, consider the Networking Concepts class. If you're not sure, we'll have you speak with one of our knowledgeable instructors to help determine where you should start.

Can I take this class online?
Yes, you can. The class is designed to be offered online and is available 24/7. The best feature is the instructor assigned to you – on day 1 – for the duration of your class. They are 100% confident that if you follow their direction, you'll earn certification. Instructors are available via text, phone, or email.

How long will it take to finish?
Many students complete the class sooner, but we give you three months so you can work at a pace that fits into your current commitments.

Who should take this class?
Anyone who believes computer networking is here to stay should take this class, and that pretty much means everyone.
